- 

## Projects

### Trash Trade

A project aimed at reducing global trash by using computer vision to detect trash types. Users can trade trash for points, which can then be exchanged for gifts.

- Technologies: Computer Vision, Python, Flask
- GitHub Link: [Trash Trade GitHub](#)

#### **Blog Platform**

A blogging platform where users can create accounts, post blogs, comment on others' posts, and like blogs. Developed using React for the front-end and Node.js for the back-end.

- Technologies: React, Node.js, MongoDB

#### **DevAsk**

A Q&A platform inspired by StackOverflow, designed for developers to ask coding-related questions and provide answers.

- Technologies: JavaEE
- GitHub Link: [DevAsk GitHub](#)

#### **PentaForce ERP**

An ERP system developed with a team of students from Host Myanmar Institute as part of the JavaFE project.

- Technologies: Java, MySQL
-
